# **Stator Production with Distributed Winding(Hairpin)**

# Stator Production with Distributed Winding(Hairpin)

A hairpin motor is formed by bending rectangular magnet wires into a hairpin shape and inserting them into an iron core at greater power density, which can generate increased power of 20% or more in the same motor size as a conventional winding motor. The overall technology and performance features include increased slot fill factor and motor current, improved heat dissipation in a slot and miniaturized motor volume.

Pacific Electric Wire and Cable Co., Ltd.'s (PEWC) ongoing dedication to product development and technological advances has earned it accolades and recognition, both at home and abroad, for its consistent production of high-quality rectangular magnet wires for EVs. To meet the increasing demand for coil windings, PEWC has expanded its manufacturing operations, establishing a comprehensive set of equipment dedicated to hairpin windings. Moreover, PEWC is capable of designing, prototyping and providing volume production, enabling PEWC to provide advanced design and production services for its customers.

PEWC possesses the engineering and technical capabilities to design and produce 160mm to 400mm outer diameter motors, which have two sets of common motor winding platforms of 220mm and 400mm and correspond to power range of 80KW to 350KW. Hence, customers can appropriately adjust the electrical parameters based on the basic structure of the platforms to customize a vehicle's feature requirements and performance.

Product of Hairpin Stator Winding		
Product Name	OD 220	
Application	EV traction motors for passenger car and light truck	
Features	Rectangular magnet wire: 4~10mm²	
	Core thickness range: 80mm~150mm	

Reference Motor Specification				
Unit	Value			
kW	75			
kW	150			
V	400

Product of Hairpin Stator Winding		
Product Name	OD 400	
Application	EV traction motors for electric bus	
Features	Rectangular magnet wire: 4~10mm²	
	Core thickness range : 200mm~295mm	

Reference Motor Specification				
Parameter	Unit	Value		
Rated Power	kW	230		
Peak Power	kW	330		
Nominal Voltage	V	600		
Rated Current	$A_{rms}$	500		
Peak Current	$A_{\rm rms}$	750		
Rated Torque	Nm	2,300		
Peak Torque	Nm	3,800		
Nominal Speed	rpm	1,050		
Maximum Speed	rpm	2,800		
Maximum Efficiency	%	97		
Stator Outer Diameter	mm	400		
Stator Inner Diameter	mm	296		
Stack Length	mm	280
